

ENGINEERING STATEMENT

The engineering data contained herein have been prepared on behalf of EBC SYRACUSE, INC., licensee of WNYI(TV), Channel 52, Ithaca, New York, in support of its Application for Construction Permit to operate its post-transition digital facility.

It is proposed that EBC Syracuse will mount a standard SWR omnidirectional antenna at the 21-meter level of the 52-meter tower located at the currently authorized WNYI(TV) site. Exhibit B provides the elevation data for the existing antenna. Exhibit C is a map upon which the predicted service contours are plotted. The city of license is entirely contained within the 48 dBu contour. It is important to note that the proposed 41 dBu contour matches that of the allotment facility assigned in Appendix B of the Commission's DTV Table of Allotments. An interference study is provided in Exhibit D. A power density calculation follows as Exhibit E.

Because no change in the overall height or location of the existing tower is proposed, the FAA has not been notified of this application. Due to its diminutive height and proximity to the nearest airports, the FCC has not issued an Antenna Structure Registration Number to this tower.

I declare that the foregoing statements and the attached exhibits are true and correct to the best of my knowledge and belief.

JEFFREY S. FISHER
