Subject: STA Extension Request WELM AM

To Whom It May Concern:

Tower Broadcasting, LLC requests an STA extension for WELM AM.

The following has been accomplished within the past six months:

Settled \$50,000 debt payment from previous owner, with IBC Engineering, Bill Sitzman (retired). Since IBC designed the diplexers and phasors, payment of this debt provided full technical design data and engineering consulting support.

It has been discovered all the networks had been re-configured from the system engineered by IBC by previous engineers.

The diplexer, ATU's and Phasors are in the process of be rebuilt to the design configuration.

Current impedances at the transmitter output is approximately two (2) ohms.

IBC has also notified that the network cabinets were improperly built and should be all redone. Once the components have been changed to the installed values and the networks tuned the enclosures will be changed.

This has been a time consuming and costly process but are hopeful the STA will be renewed so the network can be re-established.

Sincerely,

Gordon Ichikawa
