

EXHIBIT 12

Page #1, Waiver Request of Section 74.1204

K205EN Aberdeen, WA 100 Watts ERP

Calvary Chapel of Twin Falls, Inc. 8/02

The proposed site is contained entirely inside the service contour of second-adjacent Station, K207DB, Aberdeen, WA

K207DB

The proposed site is contained entirely inside the service contour of second-adjacent Station K207DB, Channel 207, Class D, 0.100 kW, Aberdeen, WA. As shown by the map on **page #2** of this waiver request, the level of the second -adjacent station K207DB arriving protected F(50,50) signal at the proposed transmitter site is 110-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to K207DB is 150-dBu (free-space contour method employed). This means that the 150-dBu interfering signal would extend 2 meters from the center of radiation, which is proposed at 27 meters AGL. Since no population inhabits this interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second -adjacent channel station K207DB.
