

EXHIBIT E-2
ENVIRONMENTAL STATEMENT
K295BM MASONVILLE, COLORADO
MITCHELL A. BERANEK
JANUARY 2009
FCC FORM 349

The proposed operation of K295BM will radiate only 3 watts Effective Radiated Power with both horizontal and vertical polarization.

Because the total ERP from the combined operation is less than 100 watts, it is categorically exempt from environmental processing.

The Licensee, Mitchell A. Beranek certifies that it will cooperate with tower personnel and other users of the tower to either reduce power to safe operating levels or cease transmissions while maintenance is performed on the tower.

The applicant assumes full responsibility for remedying the complaints of blanketing interference for a period of one year. With the low proposed ERP, 99 watts, no blanketing interference issues are anticipated. Plus this area is remote and not populated.
