

# **EXHIBIT 15**

Calvary Chapel of Twin Falls, Inc.

July 2003

**Cloverdale, OR**

New-T

Calvary Chapel of Twin Falls, Inc. is operating K203BT, Eugene, OR, a licensed FM Translator at 8 Watts ERP with a direction FMV transmit antenna. K203BT is located at the following coordinates:

44-06-58.0 N

122-59-50.0 W

CSN International has on file with the FCC a full service application File # BPED19990104MG on Channel 203, which is due to be granted in a settlement in the near future. When BPED19990104MG is granted K203BT, Eugene will no longer be compliant with FCC CFR Rules and Regulations and will be forced to turn and give up its license, off when BPED19990104MG turns on, under current conditions. Because there is a freeze in the NCE the only modification for this station would be a minor change, which is not available at this time and doesn't appear it will be in the near future as well.

Calvary Chapel of Twin Falls, Inc., also an affiliate of CSN International proposes that even though there is some same coverage on this application with K203BT, Eugene, once BPED19990104MG, Junction City, OR is granted this New-T application will be able to continue serving the public interest as did K203BT since it was first licensed in June of 1995. At the time that K203BT can no longer operate, Calvary Chapel will request of the FCC that this application re broadcast BPED19990104MG, Junction City with an over the air signal feed. Calvary Chapel feels that due to the FCC freezes and auctions for the entire band, even though there will be some same coverage between this application for New-T and K203BT, it will not last for long as K203BT will be lost to the full service station.

Calvary Chapel of Twin Falls, Inc. respectfully requests that these considerations be taken in to account for a grant of this New-T application for Cloverdale, OR.
