Subject: WCAD STA request BSTA-20171031ABD

Can you provide some information relating to this STA request? Other than the power, there is no technical information provided. And from the description of the damage, it would not seem that the licensed station parameters are usable.

Particularly: is the station operating from its licensed transmitter site? How high is the antenna above the ground? What's it mounted on (part of the damaged tower, a roof, a pole, for example)?

I realize exact information may be hard to come by for the present, but any technical data you can provide will help.

Thanks! Dale Bickel dale.bickel@fcc.gov
