

Environment Impact & RFR Compliance Statement

KLFG will be located at an established communications site that is in compliance with all environmental impact requirements.

This minor construction permit modification specifies a change in the ERP to 34.0 kW (H&V, non-da) and a change in the antenna height to 252 meters COR AGL. For a worst case estimation at 2 meters above ground level the RFR is no more than 18.2% of the general population/uncontrolled MPE limit.

There are other broadcast facilities at the site, KNSK (FM) & KTIN (DTV). KNSK operates with 100 kW ERP (H&V) at a COR AGL height of 320 meters. For a worst case estimation at 2 meters above ground level the RFR is no more than 33.0% of the general population/uncontrolled MPE limit. KTIN operates on Channel 25 with 600 kW ERP at a COR AGL height of 355 meters. For a worst case estimation at 2 meters above ground level the RFR is no more than 1.8% of the general population/uncontrolled MPE limit. The combined RFR of all facilities is 53.0% of the general population/uncontrolled MPE limit.

RFR hazard signs are posted at the site and the site has restricted access to only authorized personnel. The applicant certifies that in cooperation with other users of the site all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations. Information pertaining to the contact representative of the facility will be posted.
