

EXHIBIT 18-2

Radio Multiple Ownership

With few exceptions, every radio station owned or attributable to CCC belongs to one or more radio multiple ownership combinations. Pursuant to Section 73.3555(a)(1) of the Commission's Rules, the agency uses a tiered approach to determine whether a combination of commonly-owned or attributable radio stations complies with the radio ownership limitations in a particular market.¹ To demonstrate compliance with this rule, the FCC relies upon one of three different methodologies:

Arbitron Only Methodology

In situations where more than one commonly-owned and/or attributable radio station is "home" to *and* licensed to a community within an Arbitron Metro's boundaries, the Arbitron-Only Methodology applies. Using this Methodology, the FCC determines the number of stations in the radio market by counting all commercial and non-commercial stations that are either "home to" the Arbitron Metro and/or are licensed to a city within the Arbitron Metro's boundaries, as listed by BIA in its "FCC Geographic Market" analysis. A majority of the radio combinations attributable to CCC involve stations that are both "home to" and licensed to communities within an Arbitron Metro.

¹ Under this approach, entities under common control may have a cognizable interest in radio broadcast licenses with the following limits: (i) In a radio market with 45 or more full-power, commercial and non-commercial radio stations, up to 8 commercial radio stations, of which not more than 5 are in the same service; (ii) In a radio market with between 30 and 44 stations, up to 7 stations of which not more than 4 are in the same service; (iii) In a radio market with between 15 and 29 stations up to 6 stations, of which not more than 4 are in the same service; (iv) In a radio market with 14 or fewer stations, up to 5 stations, of which not more than 3 are in the same service; provided, however, that no entity may have a cognizable interest in more than 50% of the stations in such market unless the combination of stations comprises not more than one AM and one FM station.

Contour-Only Methodology

For combinations involving stations that are licensed to communities outside an Arbitron Metro, the FCC currently applies an interim contour-overlap method. Under this approach, the applicable market is defined by the overlapping principal community contours of the commonly-owned stations. To determine the total number of radio stations in the market, the Commission includes any station whose principal community contour overlaps that of at least one of the commonly-owned stations, with two exceptions. It excludes those stations with transmitter sites farther than 92 kilometers (58 miles) from the perimeter of the common overlap area and/or commonly-owned radio stations that do not overlap the mutual overlap area of the other stations in the combination.

Arbitron-Contour Methodology

In two circumstances, the FCC requires both Arbitron and Contour Methodology Showings: (1) Where one of the commonly-owned stations is licensed to a community outside of an Arbitron Metro, but is considered "home to" an Arbitron Metro; and (2) Where a station that is licensed to a community within an Arbitron Metro (regardless of whether the station is home to that Metro) has overlapping principal community contours with at least one other commonly-owned station that is not licensed to a community in an Arbitron Metro.

Table I and the supporting attachments demonstrate to the Commission whether existing CCC radio combinations will comply with the multiple ownership rules post-transfer. Columns A through F of Table 1 contain pertinent information regarding each CCC-held station. The table denotes each of the radio ownership combinations in which the station is involved and the methodology used to determine whether that particular combination complies with the rules.² Specifically, each call sign's line entry includes, as Column H, a list of the CCC owned or attributable stations comprising the radio ownership combination or combinations in which that station is included. Because

² Columns A through F of the table provide information about each station, including its call sign, FCC Facility Identification Number, city and state of license, and the name of the CCC licensee holding its license. The table lists stations alphabetically by licensee, and within each licensee, numerically by FCC Facility Identification Number. The table abbreviates licensee names in Column D as follows:

<u>Licensee Name</u>	<u>Abbreviation</u>
Ackerley Broadcasting Fresno, LLC	ABF
Ackerley Broadcasting Operations, LLC	ABO
AMFM Broadcasting Licenses, LLC	AMFM BL
AMFM Radio Licenses, LLC	AMFM RL
AMFM Texas Licenses Limited Partnership	AMFM TL
Capstar TX Limited Partnership	CTX
CC Licenses, LLC	CCL
CCB Texas Licenses, L.P.	CCB TL
Central NY News, Inc.	CNYN
Citicasters Licenses, L.P.	CL
Clear Channel Broadcasting Licenses, Inc.	CCBL
Jacor Broadcasting Corporation	JBC
Jacor Broadcasting of Colorado, Inc.	JB CO

Stations operated pursuant to an LMA or a JSA are denoted by "LMA" or "JSA" in Column D. In Column G, an "A" denotes an Arbitron methodology showing and a "C" indicates a Contour methodology showing. Many of the contour radio ownership combinations have a number after the "C." This number corresponds to the market number on the relevant contour map. For example, KFNK(FM) (the first entry on the table) is in radio combination C-2 on page B-223. This means that that KFNK(FM) appears in Market 2 on the contour map on page B-223. Also, a number of contour methodology radio ownership combinations appear on more than one contour map. For example, WNCO(AM) (page 4 of the table) appears in contour market C-4 of the Cleveland, OH Area contour map (page B-58) and in market C-1 of the Akron, OH Area contour map (page B-1).

many radio stations are involved in more than one radio ownership combination, the Column H entry may include multiple rows listing the various combinations.³ Column I lists the number of AM and FM stations in the existing CCC combination. Column J contains the total number of stations in that relevant radio market, followed by Column K which indicates whether, and to what extent, the combination exceeds the current ownership limits.⁴ Note that following *each* station entry in Column A, Column K separately indicates, for each market in which that station is present, the divestitures required for that market to meet the current ownership limit without “grandfathering” exceptions or waivers. Because this information is repeated for each station call sign in a particular combination, the entries in Column K are not intended, in the aggregate, to sum up to the total number of divestitures required. (For example, for KOST-FM (Fac. Id. No. 34424), Column K sets forth the required divestitures to bring into compliance the Arbitron Metro Market of which KOST-FM is a part (1 FM + 1 FM or 1 AM). For KLAC(FM), which is in the same Arbitron Metro Market, Column K also reports the same required divestiture for that same market (1 FM + 1 FM or 1 AM).) Finally, in Column L, the table directs the reader to the attachment page(s) on which can be found

³ Rather than enter the same contour combination in the table next to each of the call signs comprising that combination, Column H cross reference the first call sign next to which that combination appears. For example, the first page of the table includes KFNK(FM) which is in a radio ownership combination including: KHHO(AM); KJR(AM); KFNK(FM); KNBQ(FM); KJR-FM; KUBE(FM). Instead of listing this same combination in Column H next to KHHO(AM), KJR(AM), KNBQ(FM), KJR-FM and KUBE(FM), the entries for those stations simply reference the KFNK(FM) entry: “See KFNK(FM).”

⁴ Again, the parties note that CCC will be filing applications to sell the requisite number of stations in the non-compliant combinations.

specific information supporting the conclusion reached concerning the combination's compliance with the multiple ownership rules.

Where Arbitron Methodology has been used to assess whether particular combinations comply with the multiple ownership rules, the Exhibit provides BIA FCC Geographic Market printouts obtained from BIA's Media Access Pro dated between November 28, 2006 and December 4, 2006 as Attachment A. Where a contour methodology was required, the Exhibit provides contour maps depicting the markets created by the combination of commonly-owned and/or attributable stations as Attachment B.⁵ On the page before each map, one or more tables list those stations whose principal community contours overlap at least one of the commonly-owned station, excluding; (1) those with a transmitter site farther than 92 kilometers from the perimeter of the common overlap area; and/or (2) commonly-owned radio stations that do not overlap the mutual overlap area of the other stations in the combination. Note that these tables do not list all stations in the market in situations where the total number of stations in a market significantly exceeds the number needed to justify the ownership combination.⁶

⁵ In the Attachment B contour maps: dark blue lines indicate FM stations that are "home" to *and* licensed to communities within an Arbitron Metro's boundaries; light blue lines denote FM stations that are not licensed to communities within an Arbitron Metro's boundaries (these stations may or may not be "home" to an Arbitron); red lines represent AM stations that are "home" to *and* licensed to communities within an Arbitron Metro's boundaries; and orange lines show AM stations that are not licensed to communities within an Arbitron Metro's boundaries (these stations may or may not be "home" to an Arbitron).

⁶ This is denoted by a "+" after the number provided in Column J.
