In evaluating the proposed Digital Displacement for K68DL, an outgoing interference study was executed on the proposed parameters on channel 8(S) with an ERP of 0.170 KW. The stations listed in the table below showed possible interference. When these stations were evaluated for outgoing interference using the OET-69 Longley Rice methodology with a cell size of 1km and a 0.1km radial spacing, there was zero percent interference present found in each case when rounded to the nearest percent.

Callsign	Fac ID	ARN	City	Class	Ovl %

KIRO-TV	66781	BLCT2021	SEATTLE	NTSC	0.0

**It is noted that this station is close to the Canadian border, however, the 13.5 dBu F(50,10) contour does not cross the border, so no Canadian coordination should be necessary.**

The following pages identify the considered list of stations when the outgoing interference analysis was executed.
