

EXHIBIT 10 FOR K270CE

COMPLIANCE WITH SPECIAL CONDITIONS

This exhibit is responsive to the Special Operating Conditions specified on the K270CE construction permit BPFT-20131029AAB.

Condition 1: The permittee/licensee in coordination with other users of the site Agrees to reduce power or cease operation as necessary to protect persons having access to the site, tower or antenna from radiofrequency electromagnetic fields in excess of FCC guidelines.

Condition 2: This application is being filed to indicate the facility has been constructed and has initiated program test operation.

Condition 3: K270CE has been constructed on the existing tower employed by AM station KCHS, which employs an AM shunt feed with the base of the tower connected directly to the ground system. While the K270CE construction permit specifies that KCHS was to file an application for direct measurement of power, as there is no change in the operating characteristics of KCHS, with the same feedpoint resistance and reactance, it is believed that the concurrent filing of Form 302-AM for KCHS would be unnecessary. Therefore, pursuant to Section 73.45(c)(1) of the Commission's Rules it is respectfully requested that KCHS be relieved of the requirement to file such an application. Should the Commission request the application, KCHS will file the application in a timely manner.

Condition 4: K270CE has been returned to operating status prior to the expiration of the station's license.

Sincerely,

A handwritten signature in black ink, appearing to read "Don Doni". The signature is fluid and cursive, with the first name "Don" and last name "Doni" clearly distinguishable.
