

**Environment Impact & RFR Compliance Statement**

FM translator K268AH will be located at an established communications site that is in compliance with all environmental impact requirements.

This minor change application proposes a change to a new site with an ERP of 0.055 kW (H&V, non-DA) at an antenna COR AGL height of 12 meters. For a worst case estimation at 2 meters above ground level the RFR is no more than 18.4% of the general population/uncontrolled MPE limit. There are other broadcast facilities at the site.

Per Section 1.1307(b)(1) Table 1, any Part 74 Subpart L facility with an ERP of 100 watts or less is categorically excluded from environmental evaluation. Therefore K268AH as proposed is in compliance with all environmental and RFR requirements.

RFR hazard warning signs are posted at the site and the site has restricted access to only authorized personnel. The applicant certifies that in cooperation with other users of the site all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations. Information pertaining to the contact representative of the facility will be posted.
