

**Environmental Impact & RFR compliance Statement**

FM translator K249ED is located at an established communications site that is in compliance with all environmental impact requirements.

This minor change application is for a correction in the geographical coordinates. K249ED operates with an ERP of 0.250 kW (H&V, non-DA) at a antenna COR AGL of 303 meters. For a worst case estimation at 2 meters above ground level the RFR is no more than 0.1% of the general population/uncontrolled MPE limit.

The site is also utilized by other broadcast facilities. However, facilities that contribute no more than 5% of the general population/uncontrolled MPE limit at the site comply with the requirements of OET Bulletin No. 65 with no further study, therefore this minor change application is in compliance with all RFR requirements.

RFR hazard warning signs are posted at the site and the site has restricted access to only authorized personnel. The applicant certifies that in cooperation with other users of the site all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations. Information pertaining to the contact representative of the facility will be posted.
