

TECHNICAL STATEMENT  
RADIO MULTIPLE OWNERSHIP ANALYSIS  
CITICASTERS LICENSES, L.P.

This statement and the attached figures were prepared on behalf of Citicasters Licenses, L.P. ("CLLP"), a licensee subsidiary of Clear Channel Communications, Inc. ("CCC"). CLLP proposes to modify the construction permit for KKSJ(FM), Anamosa, IA.<sup>1</sup> A multiple ownership analysis was prepared considering the following radio stations under present or proposed common ownership, time brokerage or joint sales.<sup>2</sup>

Table 1: Proposed Commonly Owned, Brokered or Jointly-Sold Stations  
Studied and Associated Arbitron Metro<sup>3</sup> Information

Calls	Fac ID	Service	Community	County	State	Geographic Arbitron Market	Declared Arbitron Market
KXIC	29075	AM	Iowa City	Johnson	IA	non-metro	Cedar Rapids, IA
KMJM	54164	AM	Cedar Rapids	Linn	IA	Cedar Rapids, IA	Cedar Rapids, IA
WMT	73593	AM	Cedar Rapids	Linn	IA	Cedar Rapids, IA	Cedar Rapids, IA
KKRQ	29076	FM	Iowa City	Johnson	IA	non-metro	Cedar Rapids, IA
WMT-FM	73594	FM	Cedar Rapids	Linn	IA	Cedar Rapids, IA	Cedar Rapids, IA
KKSJ	162475	FM	Anamosa	Jones	IA	non-metro	N/A: New station

Since certain of these stations have overlapping principal community contours (5 mV/m for AM stations, 3.16 mV/m for FM stations) an ownership study has been prepared in accordance with the Federal Communications Commission's local radio ownership rule.<sup>4</sup> KKSJ is not located within any Arbitron Metro.

CCC does not have an attributable interest in any other station with a principal community contour that overlaps or intersects the principal community contour of KKSJ(FM) as proposed, or which is located in the same Arbitron Metro<sup>5</sup> as KKSJ(FM).

Interim Contour-Overlap Analysis

Because the principal community of KKSJ(FM) is located outside any Arbitron Metro, an interim contour-overlap analysis is set forth in this statement.

---

<sup>1</sup> Facility ID 162475, permit issued pursuant to FM Auction No. 37.

<sup>2</sup> None of the following stations are attributable by virtue of a time brokerage agreement or joint sales agreement.

<sup>3</sup> Arbitron data presented herein is taken from BIA's "Media Access Pro."

<sup>4</sup> See 47 C.F.R. § 73.3555(a).

<sup>5</sup> A station is considered to be "located in an Arbitron Metro" if the station's community of license is located within the boundaries of that Metro, or, the station is listed as "Home" to that Metro by BIA. In this case, the community of license of the proposed KKSJ (FM) station, "KKSJ (FM)", is not located within any Arbitron Metro.

### Interim Contour-Based Radio Markets

A "radio market" under the interim contour-overlap method is the area encompassed by the mutually overlapping principal community contours of the stations under common-ownership or attribution. Here, such mutually overlapping contours form one "radio market" for interim contour-overlap analysis under the Commission's rules.

The interim contour-overlap "radio market" is defined by the mutually overlapping principal community contours of the KKSJ(FM), KMJM(AM), WMT(AM), KXIC(AM), WMT-FM, and KKRQ(FM). The predicted principal community contours of these stations (3 AM / 3 FM) are shown in *Figure 1*. *Figure 2* depicts other stations whose principal community contours overlap this combination. *Figure 3* is the tabulation of some of the radio stations identified in the "radio market."

### Count of Stations in Defined Markets

The number of radio stations in a "radio market" is determined by counting the operating stations having principal community contours which overlap or intersect the principal community contours which define the radio market, plus the subject commonly owned or attributable stations, excluding any stations whose transmitter sites are further than 92 kilometers from the perimeter of mutual overlap, and excluding any commonly owned or attributable stations that do not serve to define the market.

In the interim contour-overlap "radio market" studied herein, there are at least 48 radio stations, including the subject co-owned stations, which overlap or intersect with the defined "radio market." *Figure 3* is the tabulation of some of the radio stations identified in the "radio market".

Only known licensed, operating radio stations were included in this tabulation. Distances to contours for AM stations were predicted using the antenna patterns as identified in the Commission's AM database and the appropriate Ground Wave Field Strength versus Distance Graph of 47 C.F.R. § 73.184. Ground conductivities were obtained from FCC Figure M3. Distances to the FM contours were determined based on the method of 47 C.F.R. § 73.313. Terrain data was derived from the N.G.D.C. 30 second computer database for each of the FM stations using radials spaced every 45 degrees of azimuth.

### Conclusions

In the interim contour-overlap "radio market" studied herein, there are at least 48 stations, including the commonly-owned 3-AM / 3-FM stations.

Based on the above, it is concluded that the proposed application complies with Section 73.3555(a) of the FCC Rules.

Respectfully submitted,

Lance Nelms  
FCC Engineer  
August 15, 2007
