

Environment Impact & RFR Compliance Statement

W220BD is located at an established communications site that is in compliance with all environmental impact requirements.

This minor change application specifies a change in the antenna make/model only, from a Scala GP-FM (V) to a Nicom BKG77 1 bay (H&V). W220BD will continue to operate with 0.010 kW ERP at an antenna COR AGL height of 14 meters. For a worst case estimation at 2 meters above ground level the RFR is no more than 2.3% of the general population/uncontrolled MPE limit. There are no other broadcast facilities at the site.

Facilities that contribute no more than 5% of the general population/uncontrolled MPE limit at the site comply with the requirements of OET Bulletin No. 65 with no further study. Furthermore, per Section 1.1307(b)(1) Table 1, any Part 74 Subpart L facility with an ERP of 100 watts or less is categorically excluded from environmental evaluation, therefore W220BD is in compliance with all environmental and RFR requirements.

RFR hazard signs are posted at the site and the site has restricted access to only authorized personnel. The applicant certifies that in cooperation with other users of the site all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations. Information pertaining to the contact representative of the facility is posted.
