

KRFD(FM)
South Park, WY
Proposed Minor Modification
Of Permitted Facility

CONTINGENT Application Overview:

The instant Application is being filed contingently and contemporaneously with the proposed one-step upgrade of station KRFD(FM) (FCC Facility ID# 164126) Ashton, ID, to Channel 283C1. It should be noted that both facilities are co-owned and, therefore, a contingent application agreement is unnecessary. KRFD(FM) (FCC Facility ID# 164154) proposes to change its Community of License from Thayne, WY, to South Park, WY, and modify its currently Permitted Facilities using the following parameters:

Tech Box:

Channel:	286
Class:	C2
Antenna Coordinates:	N43-27-39, W110-45-09 (NAD 27)
Allotment Ref. Coordinates:	N43-23-42, W110-45-27(NAD 27)
ASRN:	N/A
Tower Height AMSL:	60.6 m
COR AMSL:	2479 m
COR AGL:	48 m
COR HAAT:	320 m
ERP:	11 kW
Directional Antenna:	No

Allotment Modifications:

Exhibit 1 is an allotment reference site channel spacings study for KRFD(FM) on Channel 286C2 at South Park, WY, demonstrating that the proposed facility is fully spaced pursuant to Section 73.207 towards all other authorizations, allotments, and proposals with the exception of the currently proposed application for FCC Facility ID# 166043 to conduct a Community of License Change from Dubois, WY, to Teton Village, WY (see BMPH-20080201BPB) from the following location:

Allotment Reference Coordinates: N43-23-42, W110-45-27 (NAD 27)

If the Commission determines that the Teton Village application is grantable, the Applicant respectfully requests that Channel 265A be involuntarily substituted for Channel 284A at the proposed Antenna Site at Teton Village. Exhibit 6 is a channel spacings study demonstrating that the Channel 265A would be fully spaced pursuant to Section 73.207 towards all other authorizations, allotments, and proposals and the Applicant respectfully requests that the Commission issue an Order to Show Cause to Lorenz E. Proietti (“Proiette”), permittee of FCC Facility #166043, as to why its licensed channel should not be substituted with Channel 265A at its proposed site. Applicant hereby states that it will reimburse Proiette for his reasonable expenses in changing his station to Channel 265A in accordance with *Circleville, Ohio*, 8 FCC 2d 159 (1967).

Allotment Site City-Grade Coverage:

In accordance with the city grade coverage requirements of Section 73.315, Exhibit 2 demonstrates that the proposed allotment site provides requisite coverage of KRFD(FM)'s

community of license – South Park, WY. As can be seen in the Exhibit, 100% of South Park's community boundaries are encompassed by the theoretical 70 dBu, circle contour. Also, no terrain obstructions are located between the antenna site and the community.

Suitable Allotment Reference Site:

In accordance with Note 1 to Section 73.3573, Exhibit 3 is a site map showing that the allotment reference site is located at a suitable location and is not offshore, in a national or state park, on an airport or otherwise in an area which would necessarily present a hazard to air navigation.

Antenna Site City-Grade Coverage:

Exhibit 4 demonstrates that the proposed facility's antenna site provides city grade coverage of KRFD(FM)'s community of license – South Park, WY. As can be seen in the Exhibit, 100% of South Park's community boundaries are encompassed by the F(50,50) 70 dBu contour of the proposed facility.

Interference Study (Requesting Section 73.215 Contour Protection):

Exhibit 5 is a channel spacings study from the proposed KRFD(FM) antenna site. It notes that since the shortspacings to the proposed facilities for FCC Facility ID# 166043 were addressed in the allotment stage hereto, the proposed KRFD(FM) antenna site would otherwise be slightly shortspaced to:

-RADD Ashton, ID 283C1 (Allotment Site in Contingently Proposed KRID Application)

Therefore, the applicant requests Section 73.215 contour protection processing.

KRFD(FM) is eligible to request 73.215 Contour Protection towards RADD as it complies with the minimum separation requirements on its third adjacent channel at its proposed antenna site. The channel spacings study in Exhibit 5 shows that the proposed KRFD(FM) 286C2 antenna location is spaced 76.25 kilometers from the RADD site. In order to be eligible for 73.215 Contour Protection, the minimum “C2 to C1” spacing for third adjacent channel stations must be at least 70 kilometers. The proposed KRFD(FM) 286C2 antenna site satisfies this requirement by 6.25 kilometers.

Using the facilities proposed herein, KRFD(FM) 286C2 complies with the contour protection requirements of Section 73.215 towards RADD. The attached overlap tabulation studies and overlap map in Exhibit 5A demonstrates that this application complies with the contour protection requirements of Section 73.215.

It should be noted that the following overlap studies were conducted assuming “Maximized” Class C1 Facilities for RADD (100 kW at an HAAT of 299 meters).

Using the KRFD(FM) 286C2 technical parameters proposed in this application, Exhibit 5A demonstrates that the proposed KRFD(FM) F(50,50) 60 dBu Protected Contour does not overlap the F(50,10) 100 dBu Interfering Contour of RADD operations on Channel 283C1. Likewise, Exhibit 5A demonstrates that the F(50,50) 60 dBu Protected Contour for RADD does not overlap the proposed F(50,10) 100 dBu Interfering Contour of the instant KRFD(FM)

application on 286C2. Therefore, it appears as though the instant application meets the requirements of Section 73.215 towards RADD.

Downward Radiation Study (Measure Upon Construction)

Due to the fact that several existing and proposed emitters are located at or near the site, the applicant agrees to conduct a Radiofrequency Electromagnetic Field survey at the site upon construction of the proposed facility to ensure that any areas at ground level that exceed the Commission's exposure guideline values are appropriately marked and fenced. The results of the survey will be provided with the application for license.

Even though the site will fully comply with the Site Standards, access to the transmitting site will be restricted and appropriately marked with warning signs. When it becomes necessary for workers to ascend the tower, appropriate measures, such as reduction or shut down of power if necessary, shall be taken to ensure that the human exposure to radiofrequency radiation will not exceed the FCC guidelines.

Existing Tower:

The proposed facility is exempt from environmental processing because the facility is not located at a location specified in Section 1.1307(a)(1)-(8) of the Commission's Rules and since the tower in question already exists.
