Exhibit 17A Critical Hours Statement

The Critical Hours Study included three stations, KFAQ Tulsa, OK Class A, and two foreign stations Truittier, Haiti and Landivar, Guatamala. The study concluded only KFAQ would pose a problem at the daytime 10kw proposal. Our study concludes, this proposal would have to include a critical hours proposal at 5.0kw operation during critical hours to protect the 0.1mv contour of KFAQ. Exhibit 17B shows the study data concluding a 5.0 kw Critical hours proposal would meet or exceed requirements outlined in 73.187 of the Commission's rules.
