

REQUEST FOR WAIVER UNDER 47 CFR 74.1204(d)

This narrative exhibit will request a waiver of the interference protection requirements of 74.1204 with regard to the requirement that this instant proposal and its associated interference contour would cause interference within the protected 60 dBu contours of the second-adjacent WDMT, Pittston, PA and the second-adjacent Proposed WILK-FM, Avoca, PA. This waiver is allowable under the rules stated in 47 CFR 74.1204(d). The rationale for such a waiver request is as follows:

1. WDMT, Pittston, PA and Proposed WILK-FM, Avoca, PA, second adjacent channel facilities to this translator proposal, are protected from interference within their 60 dBu contours from the associated interference contour (based on 47 CFR 74.1204(a)(1); using the FCC F(50/10) curves) which need be 40 dBu greater than the associated coverage contours (WDMT & WILK-FM) that would encompass the proposed translator antenna site and that contour which is 40 dBu greater than the associated coverage contour.

2. This translator's antenna location is located within the 60 dBu contours (based on 73.333 F(50/50)) of WDMT, Pittston, PA and Proposed WILK-FM, Avoca, PA. This proposal will use the predicted desired to undesired coverage method to determine the appropriate interference contour that need be used with regard to WDMT & WILK-FM. Included as an attachment (W274AO 102.7 Scranton, PA Desired to Undesired Ratios Map) is a map showing that the 66.9 dBu coverage contours of WDMT & WILK-FM encompasses the proposed antenna site along with the entire proposed 106.9 dBu interference contour. As the proposed 106.9 dBu interference contour is 40 dBu greater than the 66.9 dBu contours of WDMT & WILK-FM then this contour is the appropriate interference contour for this

analysis and it is clearly evident that interference will only occur within this 106.9 dBu interference contour of this proposed translator.

3. Given this translator's requested effective radiated power of 90 watts, directional; the predicted 106.9 dBu interference contour for this proposal would be exceedingly small. At any HAAT value, the maximum 106.9 dBu contour distance for this proposal is 0.30 kilometers at 12 degrees from true north and smaller than this in all other directions.

4. This proposed translator site is situated in a very sparsely populated rural hilltop area. W274AO 102.7 Scranton, PA 74.1204(d) Geo Map, an attachment to this exhibit, clearly shows how rural the area is within the 106.9 dBu interference contour of this proposal with no dwellings at all located within this contour (this contour factors in the correct directional antenna power gain in each direction for this proposal). The rule in 47 CFR 74.1204(d) states "an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such factors as may be applicable." In this particular case, as shown in this exhibit, it is clearly evident that there is a "lack of population" as defined in 47 CFR 1204(d) thus allowing this translator to operate at this proposed location.

Given the reasons outlined above, the waiver of 47 CFR 74.1204 with regards to 47 CFR 74.1204(d) would appear to stand in the public interest as it would increase the coverage area of a radio facility in this area and impose no hardship to the referenced facilities, WDMT, Pittston, PA and WILK-FM, Avoca, PA.
