To whom it may concern:

I, Chris Hall, measured the base impedance of the WPCF antenna on Friday October 5th 2018, prior to the installation of the FM antenna and coaxial cable for translator W269DR. I measured the antenna again on Monday October 22, 2018 after the installation of the FM antenna and coax for W269DR had been completed. I found no measureable change in the impedance in my before and after readings. Measurements were taken at the output of the ATU via a Delta Electronics OIB-1 bridge, driven by the Broadcast Electronics AM500 transmitter.
