

Technical Statement
Application for Construction Permit
W239AC Middletown, NY
July, 2015

This technical statement is prepared by Charles Williamson, president of Digital Radio Broadcasting, Inc., licensee of W239AC at Middletown, NY. This application amends the pending application BPFT-20150429AAH and serves to make three changes: (1) specify a different site than the licensed site; (2) specify a directional antenna pattern and (3) specify a different primary station.

The proposed facility will be located on an existing tower structure. The service contour of the proposed facility overlaps the service contour of the licensed facility.

There is no prohibited overlap to other stations.

The primary station will be FM Station WPDH-HD3, (Class B) Facility ID 71514 at Poughkeepsie, NY. The proposed facility will be a fill-in translator for WPDH and as such, the 54 dBu contour of the translator does not exceed the 54 dBu contour of WPDH. See the Contour Map attached at Exhibit 12.

The antenna elevation is compliant with 74.1235 pertaining to Power Limitations since the proposed facility is a fill-in translator.
