In evaluating the proposed facility change for W34BN FID# 67022, BLTTL-19950810JE/BPTTL-19991208AAE, an outgoing interference study was executed using the OET-69 Longley Rice Methodology with an ERP of 21.5 kW. The following list of stations was considered in the study:

Callsign	Fac ID	ARN	City	Class

Of the considered stations, the ones in the table below showed possible interference. The above station was then evaluated for incoming interference using the OET-69 Longley Rice methodology. There was zero percent (when rounded to the nearest percent) interference present. The following table identifies the actual percentage interference from the incoming interference analyses.

Callsign	Fac ID	ARN	City	Class	Overlap Pop%
