

Exhibit 8

Sufficient Financial Funds for Operation

Applicant plans to use transmission facilities including current studio, pre-existing tower site including transmitter, studio to transmitter program and control link, and transmission line. The only construction expense will be with a new three bay directional antenna, estimated to cost \$20,000. Additional electricity to operate the facility is expected to be no more than \$300 per month. These costs are a minimal increase to our current operational expenditures for station KOSU and pose no financial problem.
