
GARY GRAHAM BROADCAST ENGINEERING

**Petition for Wavier
74.1233(a)
01/29/2012**

**For: GAB LLC
K271AQ Cuero, TX
FID: 148337**

I have been retained by GAB, LLC, to assist in the Minor Modification Application and Wavier request on their behalf.

GAB, LLC, is the Licensee (upon consummation) of K271AQ (BALFT-20110606AAO). Claro Communications is the Licensee (upon consummation) of KEDA (BAL 20111006ACJ). GAB,LLC and CLARO are both principled by Gerald and Alice Benavides. Notice of Consummation for K271AQ was filed on January 12, 2012. Consummation of KEDA is expected within the next 45 days. Licensee stipulates that the final Consummation of both KEDA and K271AQ must be filed with the Commission in order for a Grant of this Wavier and Application to be received.

A Wavier of Commission Rule 74.1233(a) is sought in connection with the minor modification of K271AQ, one hop move.

1. Applicant has no history of filing serial minor modification applications. Applicant presently has a Construction Permit Granted for K271AQ, file Number BPFT-20110614ACK, which with the Grant of this Application would simultaneously release that CP back to the Commission.
2. The proposed site for this facility is mutually exclusive with the licensed facility.
3. The Minor Modification, if Granted, does not preclude LPFM opportunities

The purpose for the Wavier and Application is to rebroadcast the AM station, KEDA. During this period of economic stress and the population of each station as presently licensed, the opportunities for greater local service and marketing is with KEDA. By Granting the proposed move, the use of K271AQ for rebroadcast of KEDA allows better Local Service during night time hours and times of weather disturbances. The present Licensed contours for the two stations above overlap and the proposed K271AQ site complies with Commission rules relating to translators and AM operation.
