

Radio Frequency Radiation Study and Statement

The facilities were evaluated in terms of radio frequency radiation exposure at ground level in accordance with OET Bulletin No. 65, "Evaluating Compliance With FCC-Specified Guidelines for Human Exposure to Radio frequency Radiation."

The antenna system is an EPA type 6, 8- bay, single wave spaced antenna, mounted with its center of radiation 49.0 meters above ground level, and operates with an effective radiated power of 100.0 kilowatts in both the horizontal and vertical planes. At 2 meters above ground, at 12.6 meters from the base of the tower, this antenna will contribute worst case, 68.9 microwatts per square centimeter, or 6.89 percent of the allowable ANSI limit for controlled exposure, and 34.45 percent of the allowable limit for uncontrolled exposure. It is therefore believed that this antenna is in compliance with OET Bulletin Number 65 as required by the Federal Communications Commission.

Further, the applicant posted signs in the vicinity of the tower, warning of potential radio frequency hazards at the site. The site itself is restricted from public access. The applicant will cooperate with other users of the tower to reduce power of the facility, or discontinue operation, as necessary to limit human exposure to levels less than specified by the Federal Communications Commission should anyone be required to climb the tower for maintenance or inspection.
