## ENGINEERING STATEMENT

**AMENDMENT TO MODIFY CONSTRUCTION PERMIT  
BP-20050124AKA  
ROGER L. HOPPE, II  
KLIM(AM), BLACK FOREST, COLORADO**

**1120 KHz 17.5 KW-D/3 W-N DA-2**

This Engineering Statement and attached exhibits have been prepared on behalf of Roger L. Hoppe, II, licensee of KLIM(AM), 1120 KHz, in Limon, Colorado (250 watts ND-D), by B. Benjamin Evans, P.E. of Evans Associates Consulting Communications Engineers. KLIM has a construction permit to change the transmitter location, construct a directional antenna and increase power daytime. The purpose of this FCC Form 301 application is to change the community of license to Black Forest, Colorado, and to make changes in the engineering exhibit to reflect the proposed change in the community of license. This modification application proposes no other changes besides the change in community of license. However, in the interest of completeness, the entire engineering exhibit is included herein.

\*\*\*\*\*

## PROPOSED FACILITIES

The proposed antenna array consists of three uniform cross section guyed radiating towers arranged more or less on an east-west line (see attached Figure 2). All towers will be 79.9 degrees in radiating height, and 198 feet overall AGL.

The operating power will be 17.5 kilowatts daytime, and 3 watts nighttime. The nighttime operation will use the daytime directional antenna system parameters.

## TRANSMITTER SITE

Figure 6 is a 7.5-minute topographic map showing the proposed site.

## SIGNAL COVERAGE

The proposed predicted 5 mV/m daytime contour extends well beyond Black Forest, the proposed community of license (see Figure 8-B).

*Engineering Statement - Page 2*  
*KLIM(AM), Black Forest, CO*

## **DAYTIME ALLOCATIONS**

The proposed KLIM daytime operation will protect all pertinent daytime operations, both existing and proposed, within 30 KHz of 1120 KHz from interference in accordance with §73.37 of the FCC Rules. All daytime contours shown in the attachments have been determined using M-3 conductivities.

## **CRITICAL HOURS PROTECTION**

The proposed KLIM daytime operation will protect the 0.1 mV/m groundwave contour of the U.S. Class A station on 1120 KHz, KMOX, St. Louis, MO, during critical hours, as required under §73.187 of the FCC Rules (see Figure 5).

## **NIGHTTIME ALLOCATIONS**

The proposed KLIM nighttime operation, at 3 watts, will not cause prohibited skywave interference to the service area of KMOX or any other co- or adjacent-channel station, either existing or proposed (see Figure 10).

## **TOWER FENCES**

Fences will be erected around each tower to prevent persons from traveling or standing in areas where the RF radiation levels may exceed the FCC maximum exposure limits. The distances to these fences will comply with Supplement A of OET Bulletin 65, Edition 97-01, dated August 1997, or RFR measurements will be taken on the constructed facility to demonstrate that smaller-radius fences would be adequate.

## **ENVIRONMENTAL AND AERONAUTICAL MATTERS**

The proposed facility is not deemed to be a major environmental action as defined in §1.1306 of the FCC Rules. The proposed site is not in any area described in §1.1307(a)(1) through (7) of the FCC Rules. The tower fences as described above will assure that the levels of RF exposure in areas accessible to the public will be below FCC guidelines. Therefore, this proposal is excluded from environmental processing.

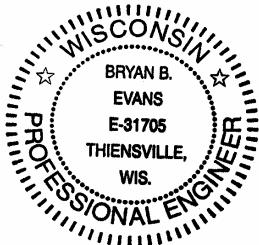

Engineering Statement - Page 3  
KLIM(AM), Black Forest, CO

The proposed towers, at 198 feet AGL, do not require notification to the FAA, nor do they need to be registered with the FCC.

This statement and attached figures are true and accurate to the best of my knowledge and belief.

A handwritten signature in black ink, appearing to read "B. Benjamin Evans".

B. Benjamin Evans, P.E.  
Consulting Engineer for Roger L. Hoppe, II
