March 28, 2007

In evaluating the proposed Digital Flashcut for K17HI, an outgoing interference study was executed on the proposed parameters on channel 17(T) with an ERP of 1.5 KW. The stations listed in the table below showed possible interference. When these stations were evaluated for outgoing interference using the OET-69 Longley Rice methodology with a cell size of 1km and a 0.1km radial spacing, there was zero percent interference present found in each case when rounded to the nearest percent, except in the case of FID 127189, where the interference is 0.9 %, however, this station is a secondary service and falls under the new 2% rule and is therefore not considered an objection.
