

Engineering Exhibit
KLEN / Cheyenne, WY / 5991

Citicasters Licenses L.P. operators of KLEN, Facility ID 5991 hereby request that special operating condition 1 on permit number BPH-20041214ADA be waived. During construction of the KLEN facilities, KGAB (Facility ID 30224) experienced a grass fire which damaged a tower and destroyed an equipment building at this location. The tower is left over from a previous operation on another frequency and is not an active element in the KGAB antenna array. The damaged tower will be removed as soon as the tower crew can schedule the work. Once the tower is removed a partial proof will be made to verify that KGAB is still within its operating parameters and a 302 will be filed to reflect these readings. Currently KGAB monitor points and Common Point are all within the proper tolerances after mounting the KLEN antenna on the KGAB array.
