

The purpose of this application is to modify the center of radiation (COR) from 51 meters to 43 meters. The effected questions in section VII is 7 thru 9 and 18.

The reason for the change in COR at this late time in the construction permit, is a result of the tower owner's structural engineer. To maintain structural integrity, the engineer feels that if the antenna was placed at the 51 meter level, this would cause a safety hazard. Therefore the owner of the tower has informed Nevada Public Radio that if KLKR is to stay on the tower, it must occupy the 43 meter location.
