

TRIBUNE

BROADCASTING

January 18, 2002

On January 11, 2002, Andrew Bater of Tribune Broadcasting Company, and a representative of the FCC, performed field measurements to determine compliance with the radio frequency measurement conditions contained in construction permits BPH-20010214ABZ and BPH-20010214ACA for FM stations KOSI and KKHK. Using a methodology approved by Dr. Robert F. Cleveland of the FCC, no ground level areas exceeding the current FCC general population exposure guidelines were found, and consequently the conditions of the construction permits have been met.
