Certification for FCC Form 350

The transmitting and receiving antennas for W243BG have been installed on an existing tower on Pope's Island, in New Bedford, Massachusetts. Per my detailed personal examination of the tower, it is grounded and there is no apparatus present for detuning it at any AM broadcast frequency. I hereby certify that the tower utilized by W243BG is neither base-insulated nor detuned at the frequency of WBSM(AM).
