May 18, 2004

In evaluating the application for a modification to existing CP to increase coverage for Merlin, OR, BNPTTL-20000831BFV FID 128672, an outgoing interference study was executed at the proposed tower location with an ERP of 1.82 kW using the outlined antenna and rotation. The stations listed in the table below showed possible interference. When these stations were evaluated for outgoing interference using the OET-69 Longley Rice methodology, the interference when rounded to the nearest 100th percent was found to be zero percent.

Callsign	Fac ID	ARN	City	Class	Overlap Population
KBLN	83306	BLCT20011018AGZ	GRANTS PASS	NTSC	0.00%

The attached page identifies the considered list of stations when the outgoing interference analysis was executed.
