

**ENVIRONMENTAL EXPLANATION**

The proposed station will operate from a top mounted antenna on an existing radio site tower.

Access to the site and tower by the general public is not available. Access to the tower is on a controlled basis. When necessary to protect workers we reduce power or temporarily suspend operation.

The proposed station will place a field at two meters elevation adjacent to the tower base, which does not exceed 13.0% of ANSI general public limits.

Total RF radiation at base of the tower will be under 13.0% of ANSI general public limits.

The facility is not located within environmentally sensitive areas. There is no change in surface features. The tower is not equipped with high intensity white lights.

The grant of this application will not be an action defined by FCC rule 1.1307, as a significant environmental action.
