## COMPREHENSIVE TECHNICAL EXHIBIT

**Amendment to Application for Construction Permit**  
**KSMV-LP, Facility ID 14002**  
**FCC File Number BDISDTL-20081022ABW**  
**KJLA, LLC**

**Amendment to Application for Displacement and Flash Cut, Licensed Facility.** The within proposal seeks to amend the above-captioned application with a reduction of effective radiated power as follows:

*Revisions In Section III, Digital Engineering Data:*

*Item 9, Maximum Effective Radiated Power is revised to 15.0 kW.*

*Item 10, Transmitter Output Power is revised to 1.0 kW.*

*Item 11, Transmitting antenna is revised to ALIVE ATC-C3 8 bay and tabulated.*

*Item 12, Out of channel emission mask is revised to STRINGENT.*

*No additional revisions are proposed.*

**Interference Analysis.** Applicant certifies that it will install a stringent specification mask filter as specified on the FCC 346 form and studied herein. Under that condition, the proposal has been subjected to the Longley-Rice interference study used by the Commission as run on the *Sun Blade* computer and found to be in compliance with §74.793 with all facilities except those listed in the attached "acceptance of interference" documentation, hereto attached and made a part of this exhibit by reference.

**Coordination with Mexico:** The use of channel 23 as a digital channel in Los Angeles has been previously coordinated with Mexico by the channel's former occupant, KTVB, at a much greater power than the within application. It is contained in the Post-Transition Digital Table of Allotments and, accordingly, the Commission has recognized that further Mexican coordination is not required.
