Surveyor's Certification

This letter is written in reference to the directional verification of the new installation of an antenna on an existing tower at Site# NV-035 Christmas Tree Pass at Latitude 35°14'54.2"N, Longitude 114°44'36.8"W, near Laughlin Nevada for CSN International.

The existing tower was surveyed using GPS Real Time Kinematic technology on March 11, 2014 and control was set referenced to True North (Geodetic). On April 25, 2014 the direction of the installation of the antennas were determined by projecting the mounting point to the ground and then another control point was set using GPS at a geodetic azimuth of 133°00'00" as provided by CSN International.

The direction of the antennas were then aligned by sighting in from the control point using a transit and the direction of each antenna then verified to an azimuth of 133°00'00" +/- 30 minutes.

Respectfully submitted,

Eric L. Stephan, PLS 12246
