

Environment Impact & RFR Compliance Statement

KLMD will be located at an established communications site that is in compliance with all environmental impact requirements.

KLMD will operate with 6.2 kW ERP (H&V, non-da) at 7 meters COR AGL utilizing a 2 bay halfwave spaced antenna that will minimize downward radiation. However, there are multiple other broadcast facilities at the site, thus a theoretical worst case estimation of the RFR of the combined facilities would exceed the general population/uncontrolled MPE limit. Therefore, during equipment tests of the completed facility RFR measurements will be taken. All areas at the site determined to exceed the general population/uncontrolled MPE limit will be ensured to have restricted access to only authorized personnel and RF radiation signs will be posted.

The applicant certifies that in cooperation with other users of the site all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations. Information pertaining to the contact representative of the facility will be posted.
