

## **CONSTRUCTED FACILITY WXYX-DT DETROIT MICHIGAN**

WXYZ-DT has been on the air since September 29, 1998, operating with an effective radiated power of 465 kilowatts. The installation of the second power amplifier has now been completed and WXYZ-DT will operate with an effective radiated power (ERP) of 770 kilowatts as permitted by the construction permit.

There has been no change of the original omnidirectional antenna or transmission line installation used to support the September 29, 1998 on-air date. The original transmitter is still in-use. A second power amplifier has been added to permit an ERP of 770 kilowatts.

The facility has been constructed in compliance with the construction permit BPCDT-20000426AAV.
