

EXHIBIT 4 IN SUPPORT OF LICENSE APPLICATION FOR KWGH-LP
ELK CREEK LUTHERAN CHURCH KENSETT,IA.

The only special condition listed on the construction permit
For station KWGH-LP concerns site safety for other users of the
tower and site. Since the effective radiated power of KWGH-LP
is 28 watts , the antenna center of radiation at 33meters AGL is
more than adequate to comply with exposure at ground level below
the antenna. The tower has only one additional antenna, that being a vertical
2 way whip antenna approximately 15 meters above the FM broadcast
antenna which is no longer in use by the property owner. In the event the
tower needs to be climbed for any reason , such as replacement of the 2 way
antenna, it will be done when KWGH-LP is off the air. The KWGH-LP
transmitter will be disabled any time work is being done on the tower.
