

Environmental Impact & RF Radiation Compliance Statement

KFRP will be located at an existing communications site that is in compliance with all requirements of Section 1.1307 of the Commission's rules.

KFRP will be located at an existing communications site that is not currently utilized by other broadcast facilities, nor are there any other broadcast facilities within 315 meters of KFRP's location. The location is an isolated site located in a rural area on a mountain with restricted access. There are no other structures at the site other than the KFRP tower structure and single level transmitter building at the base of the tower.

This modification proposes to change the COR AGL from 12 meters to 29 meters, with no change to the maximum ERP of 2.5 kW (Vertical only, DA). The rf radiation at 2 meters above the base of the tower, for a worst case estimation, is 11.5% of the FM limit which does not exceed the MPE limit. All areas of the controlled exposure limit, specifically the tower, will have restricted access to only authorized personnel, and rf radiation hazard signs will be posted at the site.

The Applicant certifies that in cooperation with other users of the site, all authorized personnel will be protected from rf exposure in excess of FCC guidelines while accessing the controlled exposure area by either reducing power or ceasing operations, and information pertaining to the contact representative of the facility will be posted.
