

## **TECHNICAL REPORT**

This technical report was developed in support of a minor change application to move the transmission facility of KWYO on 1410 kHz, Sheridan, WY to the existing KROE 930 kHz site.

### **I. Proposed site and facilities:**

<b>Site</b>	<b>N44-47-54</b>	<b>W106-55-51</b>
<b>Day Power</b>	<b>5.0 kW nondirectional</b>	
<b>Night power</b>	<b>0 .350 kW nondirectional</b>	
<b>Radiator Height</b>	<b>74 meters overall – 73.16 meters radiator/ 123.9 degrees</b>	
<b>Efficiency</b>	<b>327.36 mV/m at 1 kw at one km (see E-10D)</b>	

A site plat is provided as E10A, a topographic map as E10B, an aerial photograph as E10C with the 1000 mV/m contour marked and E10C1 showing the 25 mV/m and 1000 mV/m contours demonstrating compliance with 73.24(g) based on a population of 21 in the 1000 mV/m contour. A vertical sketch is provided as E10E.

A diplexer will be utilized to feed both the existing KROE 5 kW 930 kHz facility and the KWYO 1410 5 kW facility into the existing KROE unipole fed tower.

### **II. Daytime allocation analysis:**

The following exhibits are provided:

- E11A Day 5 mV/m demonstrating full community coverage
- E14A M-3 allocation for co-channel and adjacent channels
- E14B Proposed 5, 2, and .5 mV/m service contours
- E14C Tabulation of day allocation factors

## **Charles M. Anderson Associates**

---

These exhibits demonstrate that there is not any prohibited overlap from the proposed facility and that the proposed 5 mV/m daytime encompasses the entire city of Sheridan, WY.

### **III. Night Allocation Analysis:**

A night operating power of .350 kW nondirectional using the KROE tower is proposed. Exhibits provided are:

- E15A Night interference free calculation
- E15B Map showing nighttime NIF coverage of Sheridan
- E15C1 Nighttime interference limits study
- E15C2 RSS contribution to Bozman, MT 1410 application
- E15C3 RSS contribution to KIIX on 1410
- E15C4 RSS contribution to KHIL on 1410

The KWYO nighttime interference free contour is 5.4mV/m (see E15A). Exhibit E15C demonstrates that the KWYO 5.4mV/M interference free contour encompasses the city of Sheridan, WY.

The proposed nighttime operating power of .350 kW will result in a 13.48% reduction in the KWYO RSS contribution to the Bozman, MT 1410 kHz application's 50% RSS (from 6.686 mV/m to 5.785 mV/m – see E15C2) and a 13.09% reduction in the KWYO contribution to the KIIX 50% RSS (from 4.713 mV/m to 4.096 mV/m – see E15C3). This power level also reduces the KWYO contribution to the KHOL 25% RSS to 3.724 mV/m which is 12.1% less than the existing level of 4.235 mV/m. These levels comply with the requirements of Section 73.182(q), footnote 1 that mandates a 10% reduction in contributions to the 50% RSS for a minor change in a Class B station and equal or less contribution if the proposal enters another station's 25% RSS but not the 50%. Exhibits 15B1-2-3-4 demonstrate these reductions, and that the proposed nighttime facility complies with all other interference restrictions.

**IV. Environmental and RF analysis:**

KWYO will be located on an existing KROE(AM) tower (Registration#1009401). To the applicant's knowledge, no adverse impact will result to any applicable 1.1307 category as a result of the construction. Consequently, no environmental statement is provided. The RF contributions for KROE and KWYO were determined using Figures 2 and 3 from Supplement A to OET Bulletin 65. The KROE values are based on the 90 degree figure and the KWYO values for a 123.9 degree antenna were interpolated between values obtained at 2 meters from Figure 1 for a 90 degree tower with 1 kw and Figure 3 for a 180 degree tower with 1 kw. All values were adjusted by the square root of 5 for the 5 kw operations. The calculations were made at 2 meters to reflect the RF exposure at the antenna tuning units. The KROE fence is actually 15 feet from the tower base.

<b>Station</b>	<b>Power</b>	<b>Radiation at 2 meters</b>	<b>% of Maximum</b>
KROE	930 kHz 5 kw	80.5 V/m 0.87 A/m magnetic	13.1 53.5
KWYO	1410 kHz 5 kw	197.67 V/m .62 A/m magnetic	32.19 37.98
<b><u>Worst case total</u></b>			<b><u>91.48%</u></b>

A total radiation level of 91.48% of the maximum radiation for general population and occupational-controlled exposure is clearly within Commission guidelines.

## **Charles M. Anderson Associates**

---

### **V. Conclusion:**

It is concluded that the proposed minor modification of KWYO is in full compliance with Commission rules and policies.

---
