

EXHIBIT 10

DESCRIPTION OF TRANSACTION

As the ultimate parent of the licensee company for the instant station(s), Radio One, Inc. ("ROI"), plans to restructure certain subsidiaries that have been formed or will be formed for the principal purpose of simplifying ROI's organizational structure, consolidating certain operations, and minimizing tax and administrative complexity. Upon completion of the transactions described below, each of the FCC licenses controlled by ROI that are the subject of this application would be held by a license subsidiary that will hold such FCC licenses as its sole or principal asset. Each licensee would have an operating agreement with the affiliated entity that holds the assets necessary to operate the station(s) for which the licensee holds one or more FCC licenses, and the licensee would have access to those assets. The licenses would not be assigned or transferred to any third party separately from the assets necessary to operate the station(s).

Each of these transactions is *pro forma* in nature, since there will be no change in ownership of ROI, the parent company with ultimate control over all of the stations owned by the existing or new subsidiary companies described below.
