

STATEMENT OF JOHN E. HIDLE, P.E.
IN SUPPORT OF AN
APPLICATION FOR MODIFICATION OF
CONSTRUCTION PERMIT
BPCDT-20000428ABH
WHIZ-DT - ZANESVILLE, OHIO
DTV - CH. 40 - 620 kW - 169 M HAAT

Prepared for: Southeastern Ohio Television System

I am a Consulting Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia. My education and experience are a matter of record with the Federal Communications Commission. I am a registered Professional Engineer in the Commonwealth of Virginia, Registration No. 7418, and in the State of New York, Registration No. 63418.

GENERAL

This office has been authorized by Southeastern Ohio Television System, licensee of WHIZ-TV, channel 18, Zanesville, Ohio, and permittee of paired DTV station WHIZ-DT, channel 40, to prepare this statement, FCC Form 301, Sections III and III-D, and the associated exhibits in support of an Application to modify WHIZ-DT's construction permit, BPCDT-20000428ABH. It is proposed herein to modify the facility authorized by the DTV construction permit to enable WHIZ-TV to operate both its analog and digital stations using a common omni-directional transmitting antenna, as is currently proposed in its pending application for analog construction permit, BPCT-20010808AAS. In order to compensate for the difference in proposed antenna patterns (directional to omni) and heights above average terrain (146 meters to 169 meters) it is herein proposed to reduce the authorized DTV ERP from 1000 kW to 620 kW.

STATEMENT OF JOHN E. HIDLE, P.E.
WHIZ-DT - ZANESVILLE, OHIO
PAGE 2

WHIZ-TV proposes to install its transmission facilities on a new structure at its currently licensed site located at 39E 55' 42" N latitude, 81E 59' 7" W longitude. The structure has been registered in the FCC tower registration database, however, no registration number has yet been issued.

PROPOSED OMNI-DIRECTIONAL ANTENNA

The applicant proposes to utilize a TCI model 888-24-ND circularly polarized transmitting antenna, the same antenna proposed to be used by WHIZ-TV in pending application for analog construction permit, BPCT-20010808AAS. It is intended to mount the proposed antenna on top of the new tower support structure at WHIZ-TV's existing licensed site for use by both analog and digital stations.

PREDICTED COVERAGE CONTOURS

The predicted coverage contours were calculated in accordance with the method described in Section 73.684 of the Rules, utilizing the appropriate F(50,90) propagation curves (from 47 CFR Section 73.699, Figures 10b and 10c), power, and antenna height above average terrain as determined for each profile radial. The average terrain on the eight cardinal radials from 3 kilometers to 16 kilometers from the site, was determined using the National Geophysical Data Center Thirty Second Point Database (TPG-0050) as prescribed in the FCC Rules. Exhibit 1 shows both the predicted 41 dBF protected Noise Limited Contour and the 48 dBF principal community contour for the proposed WHIZ-DT facility. The predicted 48 dBF contour completely encompasses Zanesville, Ohio, WHIZ-TV's principal community of license.

STATEMENT OF JOHN E. HIDLE, P.E.
WHIZ-DT - ZANESVILLE, OHIO
PAGE 3

ALLOCATION CONSIDERATIONS

WHIZ-TV's DTV allotment was contained in the initial DTV Table of Allotments and is therefore not subject to minimum geographic spacing requirements, however proposed modifications to the allotment are subject to compliance with the 2% and 10% *de minimis* interference criteria contained in Section 73.623(c)(2) of the Commission's Rules.

NTSC Allocation Considerations

The instant application seeks to modify an existing DTV construction permit, and the proposed modified facility is expected to maintain its existing compliance with the Commission's interference criteria. Therefore, in order to establish the existing baseline interference relationship, a complete Longley-Rice interference study was performed, using the Commission's interference analysis software, tv_process, according to the procedures set forth in OET Bulletin 69. The relevant results of the baseline interference analysis of WHIZ-DT's construction permit, BPCDT-20000428ABH, are shown in Exhibit 2.

The baseline analysis results indicate that WHIZ-DT's existing construction permit is predicted to cause interference in excess of the 2% *de minimis* limit to the construction permit, BPET-20010321ABH, of upper fourth adjacent channel analog station WOUC-TV, channel 44, Cambridge, Ohio. WOUC-TV filed its application for BPET-20010321ABH after the DTV cutoff date of January 18, 2001 established in the *Report and Order and Further Notice of Proposed Rule Making*¹. According to the DTV processing rules in Section 73.623, which were established in that *Report and Order*, and further clarified in

¹ *Report and Order and Further Notice of Proposed Rule Making, In the Matter of Review of the Commission's Rules and Policies Affecting the Conversion to Digital Television*, MM Docket No. 00-39, 16 FCC Rcd 8 at 5946 (2001).

STATEMENT OF JOHN E. HIDLE, P.E.
WHIZ-DT - ZANESVILLE, OHIO
PAGE 4

the *Order on Reconsideration*², Section 73.623(h)(1) requires that: "...DTV applications for a construction permit or a modified construction permit pending as of January 18, 2001: (i) shall be afforded the interference protection set forth in paragraph (c) or (d) of this section as applicable: (A) by all NTSC minor change applications, ..." Since WOUC-TV's application for construction permit was filed after January 18, 2001 it is required to protect WHIZ-DT's pending cutoff application, and must accept any interference which might be caused to it by WHIZ-DT's cutoff application, and subsequent authorized facility.

Accordingly, in order to modify WHIZ-DT's construction permit and not increase the existing authorized baseline interference to WOUC-TV's construction permit, the FCC's interference analysis software, tv_process, was used to determine what value of ERP, at the proposed HAAT, will achieve that goal. Exhibit 3 shows the results of a tv_process study based on an ERP of 620 kW. As can be seen in all four scenarios, the "after analysis" interference populations for WOUC-TV shown in Exhibit 3 are smaller than the comparable "after analysis" interference populations shown the baseline study in Exhibit 2. For example: CP scenario 1 = 31465, application scenario 1 = 31432; CP scenario 2 = 31183, application scenario 2 = 31150, CP scenario 3 = 31465, application scenario 3 = 31432, CP scenario 4 = 31183, application scenario 4 = 31150. In all four scenarios the application results show a reduction in WOUC-TV's interference population of 33 persons.

It is clear that the 620 kW ERP proposed for WHIZ-DT's modified facility affords at least equal, and actually improved interference protection, by 33 persons, to WOUC-TV's construction permit, BPET-20010321ABH.

² Memorandum Opinion and Order on Reconsideration, In the Matter of Review of the Commission's Rules and Policies Affecting the Conversion To Digital Television, MM Docket No. 00-39, 16 FCC Rcd 28 at 20594 (2001).

STATEMENT OF JOHN E. HIDLE, P.E.
WHIZ-DT - ZANESVILLE, OHIO
PAGE 5

DTV Allocation Considerations

The Longley-Rice tv_process study performed at an ERP of 620 kW was also evaluated to determine if the proposed modification of WHIZ-DT's construction permit is predicted to cause any level of new prohibited interference to DTV stations, expansion construction permits or DTV allotments. The results indicate that the instant proposal is predicted to cause no level of new interference in excess of the *de minimis* criteria to the populations served by any DTV station, expansion construction permit or allotment.

Class A Television Allocation Considerations

As required in Section 73.613 of the FCC's Rules, as established in the Report and Order establishing Class A Television Service, released April 4, 2000, a study of interference contour overlap was performed, based on the proposed modified WHIZ-DT facility, to establish compliance with the protection requirements contained therein. The study results indicate that no prohibited contour overlap is predicted to occur with any LPTV station which was granted a Certificate of Eligibility for Class A Status in Public Notice DA 00-1224, Released June 2, 2000, or any LPTV station which has since obtained Class A licensed status.

BLANKETING AND INTERMODULATION INTERFERENCE

A number of broadcast and non-broadcast facilities are located within 10 km of the proposed WHIZ-DT transmitter/antenna site. The applicant recognizes its responsibility to remedy complaints of interference created by this proposal in accordance with applicable Rules.

STATEMENT OF JOHN E. HIDLE, P.E.
WHIZ-DT - ZANESVILLE, OHIO
PAGE 6

ENVIRONMENTAL CONSIDERATIONS

The proposal described herein meets the criteria specified in Section 1.1306 of the FCC Rules and Regulations as an action, which is categorically excluded from environmental processing. The proposed TV facility involves neither a site location specified under Section 1.1307(a)(1)-(7) of the Rules nor high intensity lighting as specified in Section 1.1307(a)(8).

RADIO FREQUENCY IMPACT

Effective October 15, 1997, the FCC adopted new guidelines and procedures for evaluating environmental effects of radio frequency (RF) emissions. The guidelines are generally based on recommendations by the National Council on Radiation Protection and Measurements (NCRP) in NCRP Report No. 86 (1986), and by the American National Standards Institute and the Institute of Electrical and Electronic Engineers, LLC (IEEE) in ANSI/IEEE C95.1-1992 (IEEE C95.1-1991). The guidelines provide a maximum permissible exposure (MPE) level for occupational or "controlled" situations that apply in cases that affect the general public. The FCC Office of Engineering and Technology's technical bulletin No. 65 entitled, "Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields" (Edition 97-01, August 1997), provides assistance in the determination of whether FCC-regulated transmitting facilities, operations or devices comply with guidelines limits for human exposure to radio frequency electromagnetic fields as adopted by the Commission in 1996. Bulletin No. 65 contains the technical information necessary to evaluate compliance with the FCC's policies and

STATEMENT OF JOHN E. HIDLE, P.E.
WHIZ-DT - ZANESVILLE, OHIO
PAGE 7

guidelines.

The FCC Maximum Permitted Exposure (MPE) level for "uncontrolled" environments is derived from the formula, (frequency/1500), for UHF TV stations. The MPE level for UHF stations in a "controlled" environment is derived from the formula, (frequency/300). We must consider the contributions of our own station, WHIZ-DT channel 40, and the other proposed and existing stations at the proposed site. For WHIZ-DT, which operates on television channel 40 (629 MHz), the MPE is 0.419 milliwatts per centimeter squared (mW/cm^2) in an "uncontrolled" environment and $2.097 \text{ mW}/\text{cm}^2$ in a "controlled" environment. The proposed WHIZ-DT facility will operate with a maximum ERP of 620 kW from a circularly polarized omni-directional transmitting antenna with a centerline height of 145 meters above ground level (AGL). Considering a very conservative vertical plane relative field factor of 0.3, the WHIZ-DT facility produces a predicted power density at two meters above ground level of $0.09114 \text{ mW}/\text{cm}^2$, which is 21.73% of the FCC guideline value for "uncontrolled" environments, and 4.35% of the FCC guideline value for "controlled" environments (see Appendix A). The total percentage of the ANSI value at the proposed site, considering the cumulative radiation of all stations at the site, is only 57.51% of the limit for "uncontrolled" environments, and 11.50% of the limit for "controlled" environments.

OCCUPATIONAL SAFETY

The licensee of WHIZ-TV is committed to the protection of station personnel and/or tower contractors working in the vicinity of its antenna. The applicant is committed to

STATEMENT OF JOHN E. HIDLE, P.E.
WHIZ-DT - ZANESVILLE, OHIO
PAGE 8

reducing power and/or ceasing operation during times of service or maintenance of the transmission systems, when necessary, to ensure protection to personnel. In light of the above, the proposed facility should be categorically excluded from RF environmental processing under Section 1.1307(b) of the Commission's Rules.

SUMMARY

It is submitted that the proposal described herein complies with the Rules and Regulations of the Federal Communications Commission. This statement, FCC Form 301, and the attached exhibits were prepared by me or under my direct supervision and are believed to be true and correct to the best of my knowledge and belief.
