In evaluating the proposed digital flash cut for K14LM (K57GO)FID 24570, an outgoing interference study was executed on the proposed design on displacement channel 35(T) in the attached application using the OET-69 Longley Rice methodology. The stations listed in the table below showed possible interference. When these stations were evaluated for outgoing interference, there was zero percent interference present found in each case when rounded to the nearest whole percent. Except in the cases of NEW stations filed in the LPTV companion channel window (FID 168384 and 168224) and proposed rule making applications (FID 128203) which applications have a lower priority than displacement relief applications. Additionally KRYT as LPTV analog stations are allowed up to 2.0% incoming interference. Attached below is a coverage map showing the original CP coverage and the proposed coverage.
