

Exhibit 22
Advance Ministries, Inc.
RF Compliance
Parker, Arizona

The applicant proposes securing the site with a fence to ensure compliance with FCC OET Guidelines for human exposure to radiofrequency electromagnetic fields. The site is home to several RF emitters such that the RF worksheet cannot be used in this instance. The applicant will agree to conduct RFR measurements at the site to determine compliance with FCC Rules for both uncontrolled and controlled environments. A detailed report will be included with the license application demonstrating compliance.

The permittee/licensee in coordination with other users of the site will reduce power or cease operation as necessary to protect persons having access to the site, tower or antenna from radiofrequency electromagnetic fields in excess of FCC guidelines.
