

**January 2015**  
**KWTR(FM) Channel 209C1**  
**Eldorado, Texas**  
**Statement re Mexican Coordination**

According to a comment in the Commission's CDBS database, Channel 209C1 at Eldorado was accepted by Mexico in a letter dated January 10, 2012, at NAD27 coordinates of 31-04-09N x 100-32-56W. This allotment is not short-spaced to any Mexican station or allotment.

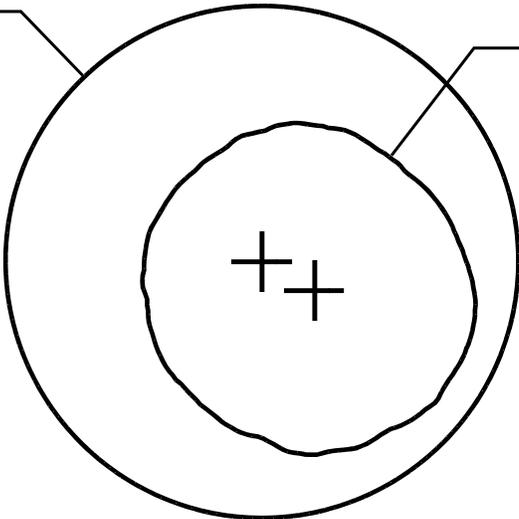

The authorized KWTR facility is located 166 kilometers from the common border with Mexico. The instant application will increase the separation to 167 kilometers from the common border.

It is not believed necessary to receive Mexican concurrence for the instant proposal prior to a construction permit grant, in that a) the proposed transmitter site is farther from Mexico than is the existing coordinated site and b) the proposed Eldorado Channel 209C1 60 dBu contour is completely contained within the previously-coordinated 72 km radius protected area. Please see the attached map exhibit for a graphical depiction of this situation.
