Minor amendment to pending application

Exhibit 22
November 2004

Environmental Impact & RF Radiation Compliance Statement

The proposed FM will be located at an existing communications site that is in compliance with all requirements of Section 1.1307 of the Commission's rules.

The proposed FM will be located at a site that is not currently utilized by other broadcast facilities, nor are there any other broadcast facilities within 315 meters of the proposed FM's location.

The proposed FM will operate with 1.6 kW ERP (non-DA, vertical-only) at a height above ground of 19.0 meters. The rf radiation, for a worst case situation, at 2 meters above ground level at the base of the tower is 18.5% of the FM rf radiation limit, which is below the MPE limit. Access to the controlled exposure area, specifically the tower, will be restricted, and rf radiation hazard signs will be posted, along with information pertaining to the contact representative of the facility.

The Applicant certifies that in cooperation with other users of the site, all authorized personnel will be protected from rf exposure in excess of FCC guidelines while accessing the controlled exposure area, including the tower, by either reducing power or ceasing operations.
