Dear Paul,

Thank you for the brief describing the co-location of the existing translator antennas for stations K203BJ (impending frequency change to channel 257) and K265AA.

Upon examination of the FCC database for these two stations, it appears that there is about 5 meters of vertical space between antenna installations, which should be more than sufficient at these frequencies to prevent any significant change in the directional pattern characteristics of either station.

This opinion carries no performance guarantee and is based solely on the data provided by Western Inspirational Broadcasters and the practical experience of our sales engineers. It is by no means a comprehensive analysis and Kathrein-Scala recommends Western Inspirational Broadcasters personnel to engage the services of a qualified communications firm for a definitive evaluation. The furnished data has not been verified by Kathrein-Scala for completeness or accuracy.

Please feel free to contact me if you need further assistance.

Best regards,

Michael Wm. Bach, Sales Engineer
