

**MINOR CHANGE APPLICATION**  
**BE-MORE BROADCASTING COMPANY**  
**WEXM (FM) RADIO STATION**  
**CH 291B - 106.1 MHZ - 30.0 KW**  
**EXMORE, VIRGINIA**  
**April 2001**

**TECHNICAL STATEMENT**

This Technical Statement and attached exhibits were prepared on behalf of Be-More Broadcasting Company ( Be-More ), permittee of WEXM, Channel 291A, Exmore, Virginia. WEXM is presently operating pursuant to automatic program test authority and has filed a license to cover the outstanding construction permit. In this instant application, Be-More is proposing to upgrade WEXM to a Class B facility and increase the power of the station to 30.0 kilowatts. No other changes are proposed.

Be-More is proposing to locate the antenna system for its upgraded Exmore facility on the same tower as its currently authorized Class A facility. As such, the Federal Aviation Administration has not been appraised of this proposal. The existing tower has been registered with the Commission and assigned FCC tower registration number 1223114. At the site proposed in this application, Channel 291B meets the Commission's minimum distance separation requirements to other FM facilities and complies with all other allocation criteria. Therefore, this proposal complies with the Commission's one-step upgrade rules.

Due to the proposed level of power of the WEXM, the Commission's RFR worksheets could not be used to demonstrate compliance with the radio frequency radiation rules. Attached as Exhibit A is a study which demonstrates this proposal complies with the Commission's radio frequency radiation rules. All documentation used to certify the technical portion of FCC Form 301, Section III-B, has been forwarded to the applicant and is available to the Commission upon request.
