Present WBZO Shortages

Channel 276A was allotted to Bay Shore, New York, in 1970. After a lengthy comparative process, a settlement agreement was reached and a construction permit was granted for a new FM station at Bay Shore in BMPH-910730ID. There is much history on the spacing issues involving this channel which, where pertinent, will be discussed as part of this instant application submitted by Mid-Island Broadcasting Limited Partnership (MBLP). At the present WBZO licensed site, Channel 276A does not meet the Commission's minimum distance separation requirements to four existing stations; WDRC-FM, WNEW, WGNY-FM and WKTU. The shortages are shown on Exhibit A1. The present shortages to WDRC-FM and WGNY-FM are based on §73.215 of the rules.¹ The present shortages to WNEW and WKTU are based on changes to the spacing rules enacted as part of MM Docket #80-90, with respect to the second and third adjacent spacing issues for Class B stations.

Proposed WBZO Shortages

As detailed below, processing pursuant to §73.215 to address the shortages to WDRC-FM and WGNY-FM is requested. The shortages to WNEW and WKTU remain unchanged and in compliance with the Commission's rules. The proposed WBZO site (which is located only

1) The licensed WBZO facilities are authorized pursuant to §73.215 with respect to WDRC-FM. The licensee of WGNY-FM invoked contour protection towards WBZO.

262 feet from the authorized WBZO site) is shortspaced to WDRC-FM and WGNY-FM. MBLP proposes to use the provisions of §73.215 of the Commission's rules to address these shortspaces.

Shortages to WDRC-FM / WGNY-FM

The shortage to WDRC-FM is 0.71 kilometer more than §73.215(e) allows for first adjacent Class A to Class B stations. Under the rules, WBZO can be no closer than 96.0 kilometers to WDRC-FM. At the time WBZO was originally authorized, the Commission had limited the amount of shortage allowed under §73.215 processing to no more than 8.0 kilometers, without consideration to the table contained in §73.215. The Commission waived the 8.0 kilometer limit and granted the application under §73.215.

This instant relocation moves the WBZO facilities further away from WDRC-FM (see Exhibit A2). As presently authorized WBZO is 95.28 kilometers from WDRC-FM. The proposed WBZO site is located 95.29 kilometers from WDRC-FM. While this distance is de minimus, it is further from WDRC-FM. Therefore, MBLP believes that continued use of §73.215 with respect to WDRC-FM is warranted. If a waiver of §73.215(e) is needed to continue this shortspace, one is respectfully requested. As will be shown below, there will be no overlap of contours between WBZO and WDRC-FM. The provisions of §73.215 will be met by specifying less than maximum Class A facilities (3.0 kilowatt equivalent, rather than 6.0) and utilizing a directional FM antenna system.

The shortage to WGNY-FM complies with §73.215(e) of the Commission's rules. Exhibit A3 specifically demonstrates that there will be no prohibited overlap between the proposed WBZO and either WDRC-FM or WGNY-FM. The contours of WDRC-FM are based on 50.0

kilowatts effective radiated power at a height above average terrain (HAAT) of 150 meters. The contours of WGNY-FM are based on their licensed values since the WGNY-FM authorization was granted as a §73.215 station. Attached as Exhibits A4 through A7 are the tabulated distances to the protected and interfering contours, along the pertinent arcs, of the proposed WBZO, WDRC-FM and WGNY-FM. Further, attached as Exhibit A8 are the tabulated and protected contours of the proposed facility, in ten degree increments. Again, there is no prohibited overlap between the facilities.

Shortages to WNEW and WKTU

As denoted above, Channel 276A was allotted to Bay Shore in 1970, pre MM Docket #80-90. In that docket, new minimum distance separations for Class B stations were enacted with respect to second and third adjacent channels. When the Bay Shore allocation was made, the Channel 276A separation requirement was 40 miles (64 kilometers) from both WNEW and WKTU. Due to the change in the spacing rules WBZO has a grandfathered shortspace to both stations. As detailed on Exhibit A1, WBZO is presently 65.17 kilometers from WNEW and 67.65 kilometers from WKTU. As shown on Exhibit A2, WBZO, from the proposed site, will be 65.24 kilometers from WNEW and 67.72 kilometers from WKTU, improving the spacing between the stations. Further, in a letter decision dated January 15, 1993,² the Commission noted in Footnote 4 :

...that WBSI (now WBZO) is grandfathered at its present site: any future transmitter site change application must be spaced at least 67.7 km from WYNY (now WKTU) and 65.2 km from WNEW-FM.

Based on the above, WBZO is improving or maintaining the shortages between itself and WKTU and WNEW and is, therefore, in compliance with the Commission's rules.

2) Letter to WYNY-FM, Group W Radio, Inc., and Shore Media, FCC Reference 1800B3-DEB/CJI in re: Application of station WBSI, Bay Shore, New York, BMPH-910730ID.
