

**Compliance with Rule 47 CFR 73.1030**

This statement is included to address the Arecibo Observatory. The requested minor change to the license of WCAD is being submitted, which will change the center of radiation above ground height. A relocation of the transmitter has not been requested in this change.

WCAD is located on Puerto Rico and therefore must coordinate with the Arecibo Observatory. The signal strength of the proposed facility will be slightly less than the current licensed facility since the only technical parameter changing is the center of radiation above ground, which is changing from 43m AGL to 36m AGL.

WCAD is 22.8 km from the Sabana Seca protected area. The proposed facility's signal strength will be slightly less than the current licensed facility since the only technical parameter changing is the center of radiation above ground, which is changing from 43m AGL to 36m AGL.

Therefore, WCAD complies with 47 CFR 73.1030.
