Exhibit 12 (Compliance with CFR 74.1204)

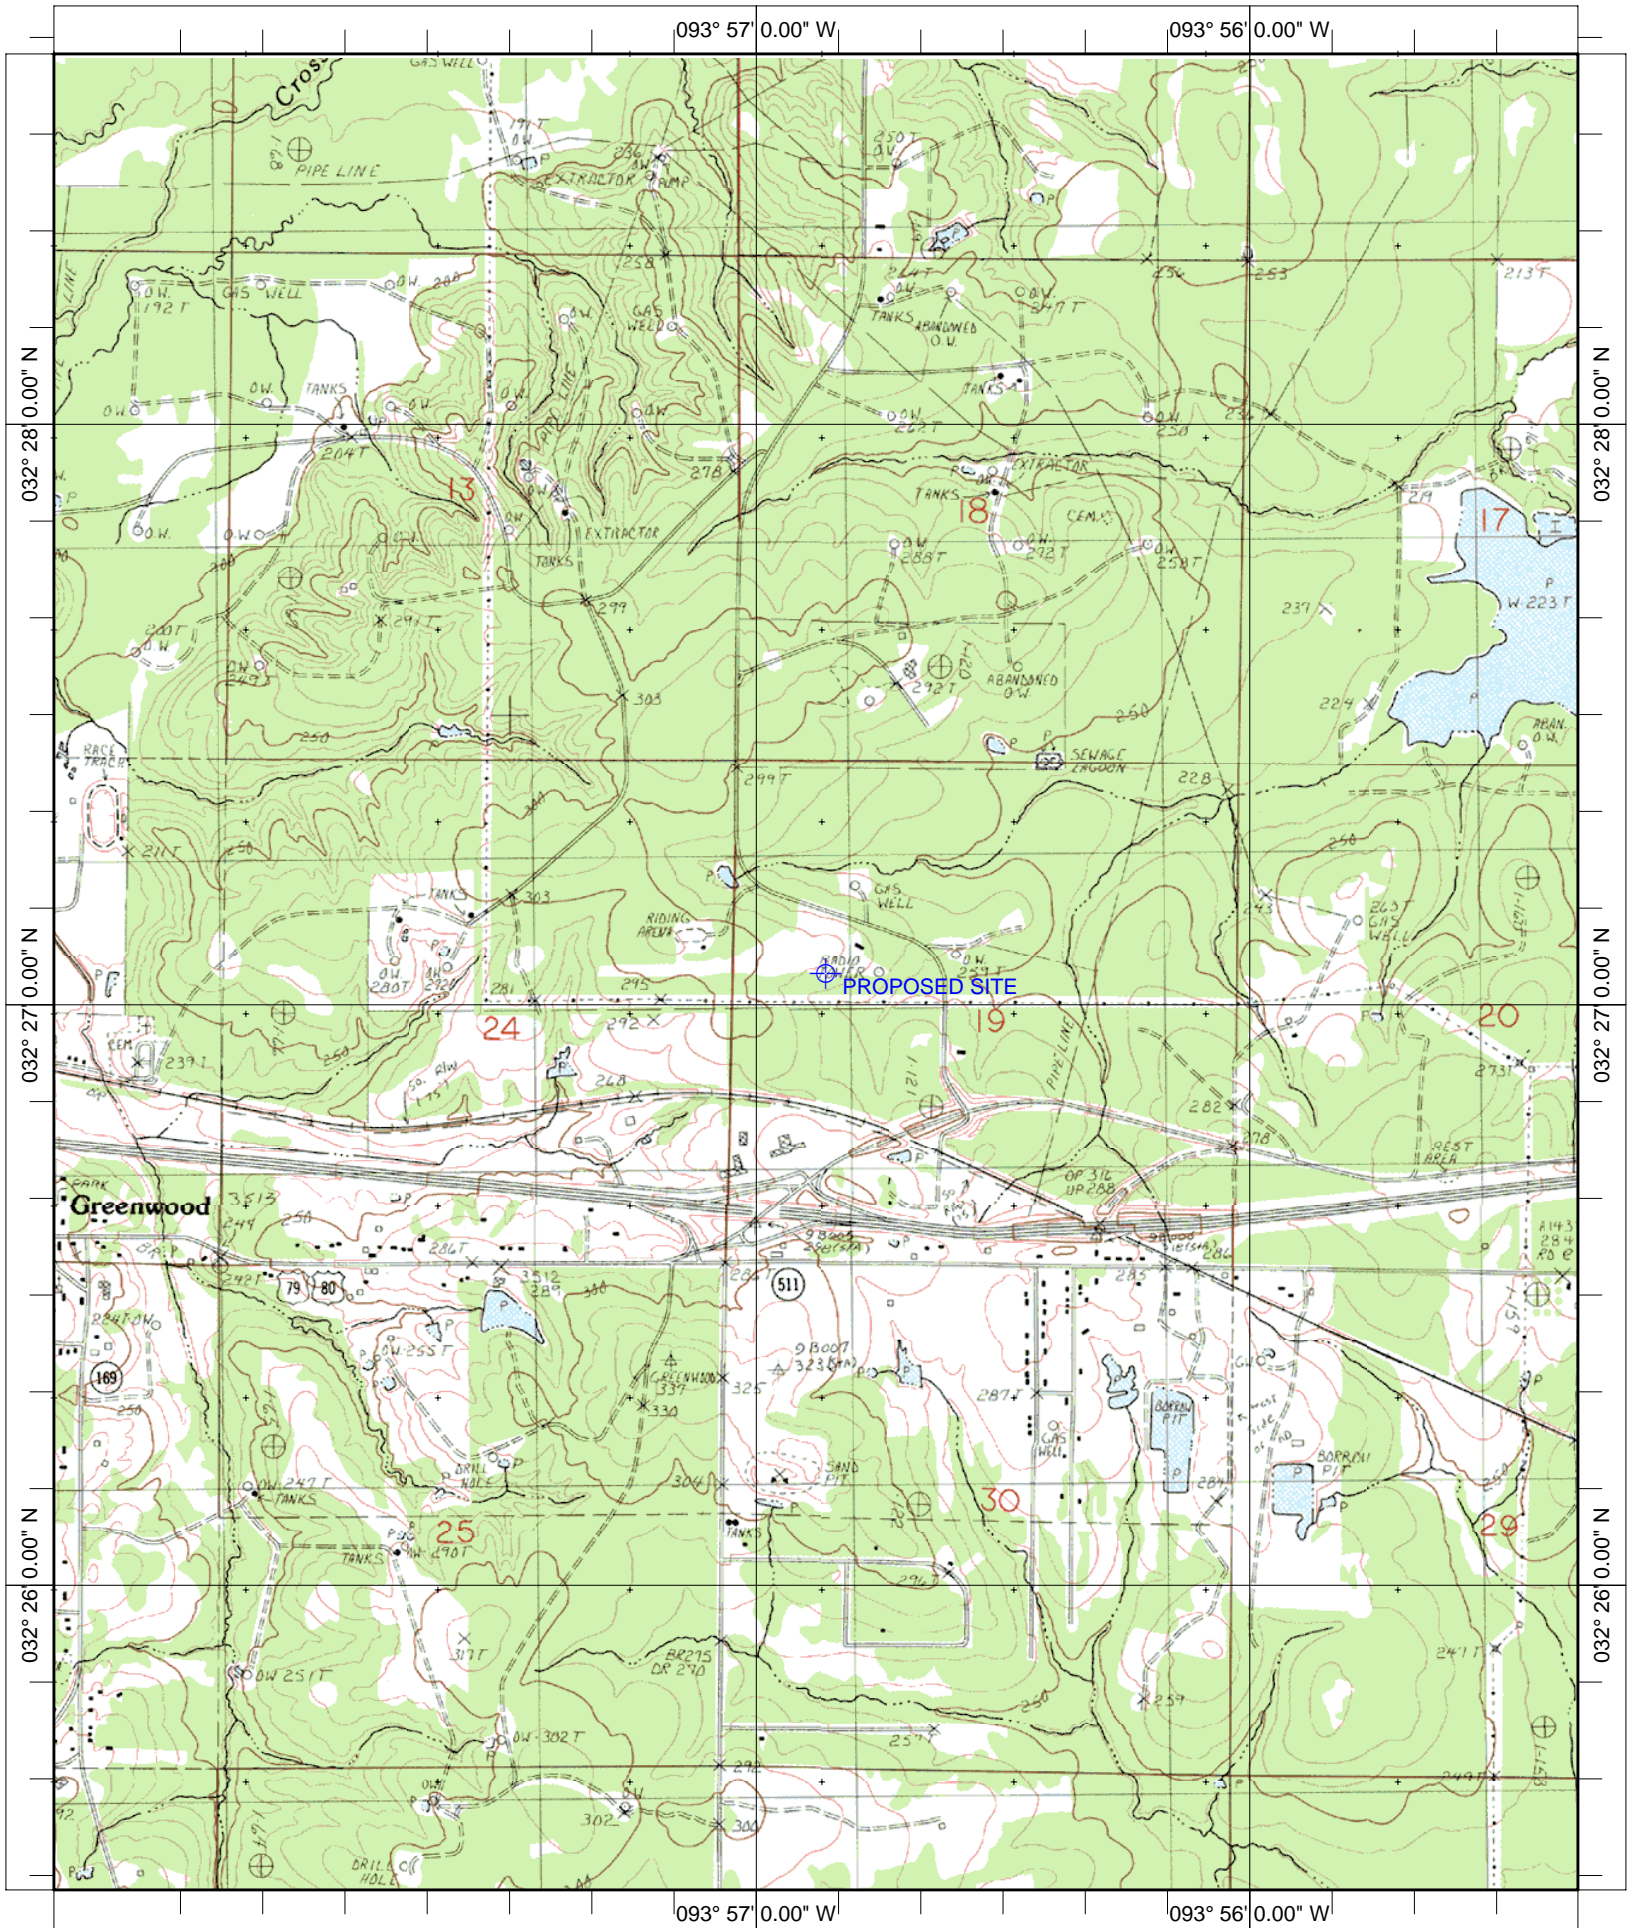

The proposed FM Translator is located within the protected 60 dBu contour of second adjacent channel station KRMD, channel 266C0, Oil City, LA. The predicted F(50-50) field strength of KRMD at the proposed translator site is 84 dBu, see E12A. Therefore, the respective predicted interfering contour generated by the proposed FM Translator is 124 dBu. This interfering contour extends less than 58 meters from the proposed transmit antenna, and the area of overlap does not reach the ground (the antenna will be mounted at the 100 meter level on a 152 meter tower).

To confirm the absence of population within the interference aperture, EMF has examined the attached topographic map, which indicates a lack of structures near the proposed tower, and therefore no structure which could be tall enough to enter the 58-meter interference aperture.

Therefore, EMF respectfully requests a waiver of C.F.R. 74.1204 based on no population within the area of predicted interference.
