

EXHIBIT 12

Waiver Request of Section 74.1204

Polson, MT K212DV 75 Watts ERP

Minor Channel Change 266

Calvary Chapel of Twin Falls, Inc. June 2008

The proposed site is contained entirely inside the service contour of second-adjacent station KIBG Bigfork, MT

KIBG

The proposed site is contained entirely inside the service contour of second-adjacent station KIBG, 264C, 85kW, Bigfork, MT. The level of least arriving protected F(50,50) signal at the proposed transmitter site is 99.8-dBu. Using the Undesired-to-Desired method for calculating proposed interference, the interfering contour is 139.8-dBu (free-space contour method employed). The interfering contour would, in the worst case at the maximum radial, extend 6 meters from the center of radiation which already exists at 31 meters AGL and will not be changed. This interference contour does not touch the ground and because this tower is located in a very sparsely populated area where there are no residences, businesses or the major roadways that will be affected by this interfering contour, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station KIBG.
